

Clarification on the doubted discrepancies:

Quick answer: There aren't any mistakes in the analyses but the way the gathered data is interpreted for the summary results is a little different in the datasets which I will explain in detail the differences.

First, the dataset we used for the analysis and visualizations is “**OntarioLead5_7_24.xlsx**” attached below. This dataset has 3 sheets, “**Master**”, “**Enrol**” and “**Pivot**”. The “**Master**” sheet is something very similar to the “**Data**” sheet of your dataset. But there are tiny differences in these two sheets resulting in the discrepancy doubt which I will explain now.

There is a column named “**Exceed2**” in our dataset which is the corresponding column for the “**Health Canada exceed (>5 ppb)**” column in your dataset, but with a tiny difference, which is the check condition is not **greater than 5**, instead it is **greater than or equal to 5**. Based on this, as you can see one of the records for the “**BAYSHORE PS**” school which equals 5 is considered a federal failure in our given dataset but it isn't a failure in your dataset, therefore your study shows 4 federal failures but ours shows 5 federal failures.

Our dataset, “**Master**” Sheet:

					Exceedance			Exceed2	
117912	CITY OF OTTAWA HEALT	9/30/2022	PLUMBING PLUMBING - STANDING-R243 RIVERVIEW (OTTAWA) (2002)	Lead	1	UG/L	.01 MG/L	N	INORGANIC CHEMICAL
117913	CITY OF OTTAWA HEALT	6/1/2022	PLUMBING PLUMBING - STANDING-R243 BAYSHORE PS (143)	Lead	5	UG/L	.01 MG/L	N	INORGANIC CHEMICAL
117914	CITY OF OTTAWA HEALT	6/1/2022	PLUMBING PLUMBING - FI LUSHFD-R243 BAYSHORE PS (143)	Lead	1	UG/L	.01 MG/L	N	INORGANIC CHEMICAL

Your dataset, “**Data**” Sheet:

										Exceedance (>10ppb)	Health Canada exceed (>5 ppb)
155763	2022-2023 50003792	R243 RIVE OTTAWA (O.Reg. 243 SMNRS	CITY OF O' ##### PLUMBING PLUMBING Lead	1.00	UG/L	.01	MG/L	N	FALSE	INORGANIC ##### <MDL	
155764	2022-2023 50003792	R243 RIVE OTTAWA (O.Reg. 243 SMNRS	CITY OF O' ##### PLUMBING PLUMBING Lead	1	UG/L	.01	MG/L	N	FALSE	INORGANIC ##### <MDL	
155765	2022-2023 50003794	R243 BAYS OTTAWA (O.Reg. 243 SMNRS	CITY OF O' ##### PLUMBING PLUMBING Lead	5	UG/L	.01	MG/L	N	FALSE	INORGANIC #####	
155766	2022-2023 50003794	R243 BAYS OTTAWA (O.Reg. 243 SMNRS	CITY OF O' ##### PLUMBING PLUMBING Lead	1.00	UG/L	.01	MG/L	N	FALSE	INORGANIC #####	
155767	2022-2023 50003796	R243 BRIA OTTAWA (O.Reg. 243 SMNRS	CITY OF O' ##### PLUMBING PLUMBING Lead	2.00	UG/L	.01	MG/L	N	FALSE	INORGANIC #####	

Note: The “**Exceedance**” column in our dataset is the exact corresponding column for the “**Exceedance (>10ppb)**” column in your dataset, I mean the check condition is **greater than 10** in both of them and they are the **same**.

Our given dataset has another sheet named “Pivot” which aggregates the gathered data and as you can see the result for the “BAYSHORE PS” has 5 failures.

		N	Y	
761	R243 A. B. LUCAS SS (7917)	29	5	34
762	R243 BAYSHORE PS (143)	29	5	34
763	R243 ECOLE ELEMENTAIRE CHANTAL-BENOIT (3500)	31	5	36

I hope the given comprehensive answer addresses doubted discrepancies clearly.

Bests,

AmirHosein Rostami
